## Key:

1 = none

2 = minor &lt; 33.3% of the visible area

3 = medium 33.3% - 66.6% of the visible area

4 = major &gt; 66.6% of the visible area

NB in the case of loss of features the score relates to the degree of damage rather than the area covered

| Description/interpretation:<br>Large supine moai lying parallel to moai 958 but nearer the road and with head towards Rano Raraku. In two main pieces, broken at neck in transport or fall. Third piece, containing much of chin now resting, almost in position, without major crack. Underneath of chin + adjacent neck has surprisingly little erosion, considering its present position. |                                                 |                                                    |                                                                |                               |
